THIRTY YEARS OF SERVICE EXCELLENCE

**LANE MCDUFF SALES COMPANY, INC.  
TERMS AND CONDITIONS**

- 1. NONPERFORMANCE:** Seller's nonperformance shall be excused where it's impossible to perform because of governmental interference, governmental regulations, strikes, and force majeure, or inability to perform with reasonable diligence.
- 2. CLAUSE LIMITING DAMAGES:** Buyer contractually agrees that it shall not be entitled to recover any damage against seller other than up to the cost of the goods on the invoice, buyer expressly agrees to write any incidental or consequential damages, loss of profit, costs, inconvenience, or other losses arising from the purchase of goods described in this invoice.
- 3. PLACE OF PERFORMANCE AND LAW:** Seller and buyer enter into this contract to sell/buy at seller's place of business; the law governing any dispute concerning the goods or this contract shall be governed by Texas law; and venue of any litigation between seller and buyer shall lie exclusively in (Tarrant County) Texas.
- 4. PAYMENT TERMS:** COD shipments are net, open accounts are 2% 10 days net 30 days or as otherwise quoted. If payment is not received by due date, a finance charge of 1.5% (or the maximum allowable in Texas) of the past due balance, will be added for each succeeding month, until payment is received. All payments will be made to Fort Worth, (Tarrant County) Texas.
- 5. TAXES:** Unless otherwise stated, prices quoted do not include City, County, State, MTA, Federal, or other taxes imposed on products or services offered by seller.
- 6. EXCLUSION OF WARRANTIES:** Seller makes no warranty, express or implied including warranty of merchantability, warranty of fitness for purpose, warranty of quality, in as much as all goods sold by this invoice are "as is" or "with all faults". If the manufacturer of goods described herein offers a warranty, the seller will notify buyer of such warranty which shall be exclusively with the manufacturer.
- 7. RETURNS:** Products shall not be returned by buyer without prior written acceptance by seller. The amount of credit, if any, shall be determined after a product inspection by seller. Seller will not accept the return of special order material. Returns are subject to 20% restocking charge.
- 8. DELIVERY:** Most orders will be delivered by Lane McDuff truck and F.O.B. your location. Where third party freight carriers are used to deliver materials, the seller's responsibility ceases upon delivery to third party carrier. Therefore claims for lost or damaged materials shall be made with third party carrier. Buyer bears the risk of loss for goods covered by this invoice/quotation from the time of their selection by seller, except where loss is caused by seller's willful conduct.
- 9. PRICING AND QUOTATIONS:** All pricing will remain firm for term stated in seller's quotation and price sheet, except in those circumstances where manufacturer recinds pricing due to raw material or other increases, which will be subject to change without notice or re-negotiation or quotes.

# Lane-McDuff Vinyl Skirting

At Lane-McDuff we are proud to offer Variform<sup>®</sup> vinyl skirting. Variform vinyl skirting features an unprecedented combination of strength, durability and appearance. This quality product is easy to install and even easier to maintain, plus you add beauty and value to your home. We understand that your home is an important investment, which is why we offer you the highest quality vinyl skirting in the industry in today's most popular styles and colors.

## Lane-McDuff Vinyl Skirting Features:

- Unique channel vent system that cleverly conceals the vents to only show the natural wood appearance
- Brings out the beauty of your home
- Easy maintenance... No Painting
- Unbending Strength... Superior rigidity provides maximum protection from blow-outs
- Manufacturer's Lifetime Limited Warranty

*The rich texture and character of woodgrain adds an elegant touch to any home.*

## FIGURING MATERIALS IS EASY!

- ✓ With a tape, measure the perimeter of the home, deck, or hot tub you wish to skirt, making sure to measure the entire perimeter, including bays and porches.
- ✓ The chart below shows some typical size homes and their corresponding linear measurements.
- ✓ To determine the average height, first measure the distance between the ground and the bottom of what you're skirting.
- ✓ Take this measurement at each of the corners and at the center of each side.
- ✓ Total all six of these measurements and divide by six to arrive at the average height. The worksheet at the right is helpful.
- ✓ Next, find that height in the chart below. Scan over to the point under the approximate linear footage of your project. That will be the number of skirting panels you will need to order.
- ✓ For the top rails, top back rails, and ground channels you'll need, look only in the column under the linear footage that come closest to your project.

Then gather your tools and begin the installation!

**SKIRTING MATERIALS WORKSHEET**

**Step One**  
Enter linear footage \_\_\_\_\_ ft. \_\_\_\_\_ in

**Step Two** — Enter actual height at each of four corners and total below.

Corner 1	_____ in
Corner 2	_____ in
Corner 3	_____ in
Corner 4	_____ in
TOTAL 1	_____ in

**Step Three** — Enter actual height at the corner of each side and total below.

Side 1	_____ in
Side 2	_____ in
TOTAL 2	_____ in

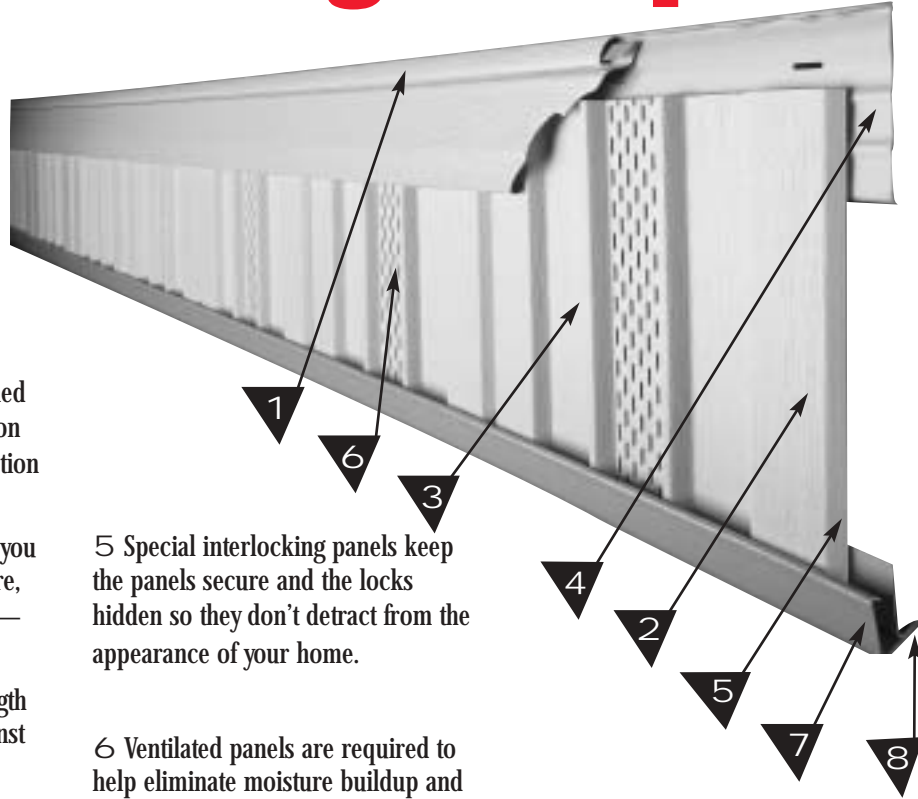

**Step Four** — Add Total 1 to Total 2.

TOTAL 3	_____ in
---------	----------

**Step Five** — Divide Total 3 by 6 and enter below.  
*This is the Average Height*

_____ in
----------

# Skirting Components

1 New top-rail design resists warping and blowout. Pre-notched front top rails allow for expansion overlap and help reduce installation time.

2 Removable-panel design lets you store garden tools, lawn furniture, and children's toys out of sight — but not out of reach.

3 New panel profile adds strength and provides extra security against wind loads. Extra-wide, 16-inch panels mean fewer panels to cut — which saves even more installation time.

4 Unique design lets panels self-adjust to ground-level fluctuations due to changes in weather conditions. These installation guides also keep panels from snagging on rail fasteners during frost heave, thereby preventing buckling.

5 Special interlocking panels keep the panels secure and the locks hidden so they don't detract from the appearance of your home.

6 Ventilated panels are required to help eliminate moisture buildup and allow for proper air circulation. (Check your home's specifications for proper ventilation requirements.)

7 "F" shaped bottom rail design (instead of a narrow "U" shaped channel) provides a stable foundation and prevents the channel from buckling.

8 And the bottom rail design, with its precut slots for ground spikes or cement screws, allows for ease of installation on concrete or directly on the ground.

*(Several different component colors are used in photos for enhancement purposes only).*

# Skirting - Installation

- 1 Use a plumb bob to find the points on the ground exactly under the corners of your home. Connect the points with a chalk line. Align ground channel over chalk line. Then use ground spikes to fasten the skirting's ground channel along the chalk lines.

- 3 Working in a straight line along the bottom of your home, nail the top back rail onto the home all around.

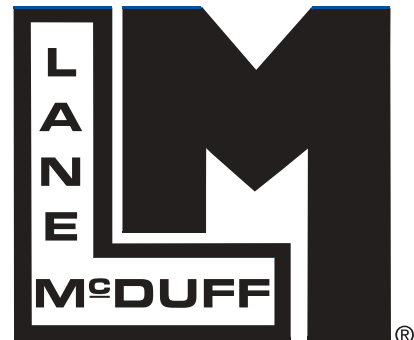

- 5 Snap the top front rail into the top back rail and you're finished.

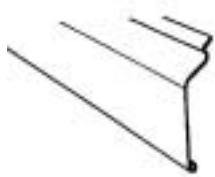

- 2 To go around corners, just notch, bend the ground channels, and attach them to the ground. Don't cut completely through them.

- 4 Cut panels to height you need, angling them on bottom to correspond to ground angle. With snap-lock tool, punch tabs every 4" along both top and bottom of edges of cut panel sections. Be sure to punch so that tabs extend outward to catch on rail. Interlock several panels at a time, then set them into ground channel. At corners, just bend panels; they're flexible. Don't cut them.

# Doors - Installation

## House Type

- 1) Rough opening preparation by home manufacturer.
  - A) Select studs for the door framing that are not warped or twisted.
  - B) Check rough opening for proper dimension.  
Call size of door equals rough opening size.  
Example: 34 x 80 call = 34" x 80" Rough Opening Size.
  - C) Measure rough opening for squareness.  
It should not vary by 1/4" on the diagonal dimension. (See illustration)

- 2.) Door installation by home manufacturer.

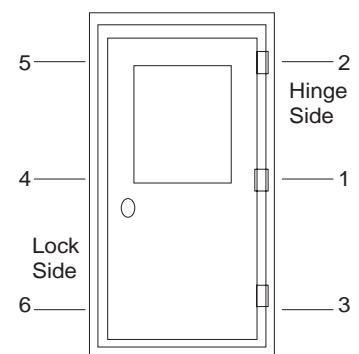

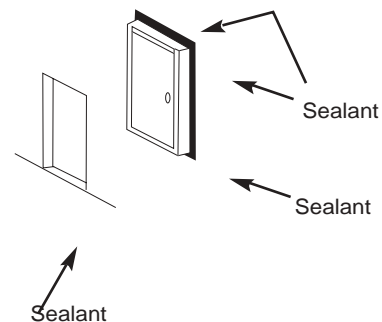

A) Be sure to leave all retaining straps, shipping blocks and shipping clips in place until installation is complete.  
Note: When shipping clips are removed, replace the screws.

B) Apply sealant (putty tape or pumpable caulk) to the backside of the mounting flange. (See illustration)  
Note; It is essential to have an adequate seal between the door and rough opening.

C) Apply sealant to the front edge of the rough opening floor or to the backside of the threshold on the front leg. (See illustration)

D) Set the door on the floor and center into the rough opening. Fasten the door with screws. Drive the first six screws in order according to the indicated number. (See illustration)

E) Apply the balance of the screws working from the middle to the corners.  
Note: screws should penetrate the stud at least 1 1".

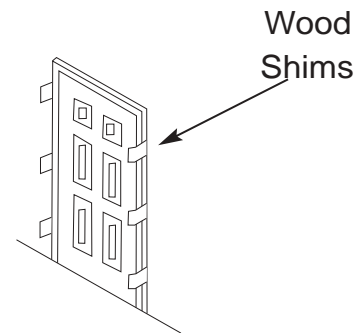

# Doors - Installation

## House Type

- F) From the inside of the house, place shims between the frame and the opening at the hinge positions on both sides of jamb. (See illustration)

Note: To hold the jamb straight, shims should only be used if there is a gap between the doorjamb and sidewall stud. Do not force shims in.

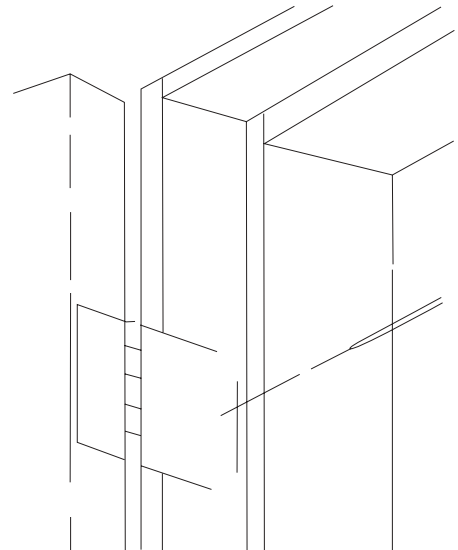

- G) Open the door. Run one long screw (provided) through the center of each hinge, penetrating the shims and the studs. (See illustration)

- H) Run long screws (not provided) through the jamb and shims on the lock side especially at strike plate.

- 1) Install all hardware on the primary door and storm door including replacing the shipping clips for transit.

- J) Caulk around the outside of the mounting flange and threshold where needed to insure a water-tight seal.

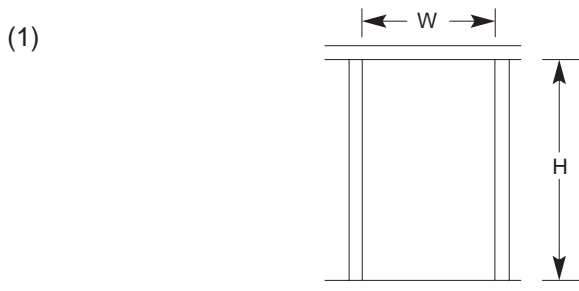

3. It is acceptable to temporarily install the door or ship the door loose in the house and install it when the house is set, providing the opening is protected from the elements. All of the above steps will need to be followed when the door is permanently installed.

# Mobile Doors-Installation

## Mobile Home

The door must be installed correctly or it may not function properly. Improper installation may void the product warranty.

Side wall rough opening must be framed to the prescribed dimensions. Door call size equals the rough opening dimensions. (See Illustration 1).

### Common Door Sizes (Wx H)

Door call sizes equal rough opening dimensions.

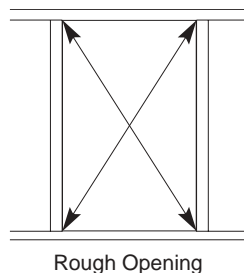

32" x 76"  
32" x 78"

34" x 76"  
34" x 80"

Rough openings must be within + 1/4" / -0" of prescribed dimensions.

Side wall opening must be square. This can be checked by measuring two corner points diagonally. The diagonal measurements must be within +/- 1/4" of each other. (See Illustration 2)

(2)

Apply a suitable nonhardening sealant to the back side of the door mounting surface around the entire perimeter (head, sill and sides), making sure to cover the mounting holes with at least 1/4" wide application of sealant. There should be no gaps or voids in the sealant application.

Note: Fasteners must be of sufficient size so that

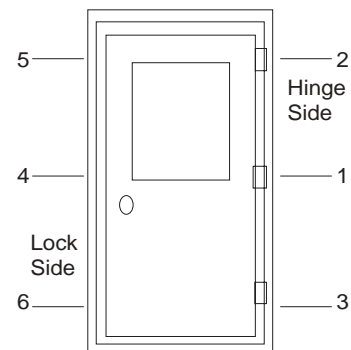

Lane McDuff Sales Company • [www.lanemcduff.com](http://www.lanemcduff.com)

they penetrate the framing stud at least 1".

The door must be inserted and centered in the rough opening. The bottom of the door frame should be firmly seated against the floor or sill plate. Do not remove the presquaring clips prior to securing the door into the wall.

While holding the door flat against the wall, install three (3) fasteners into the predrilled holes on the hinge side of the mounting flange in line with the hinges. (See Illustration 3). The fasteners must be driven straight into the wall framing member.

(3)

Install the three screws into the predrilled holes in the lock side of the mounting flange in line with the hinges.

Install the remaining screws in the predrilled holes in the mounting flange around the perimeter of the door. Care should be taken not to over torque or tighten down the screws too firmly.

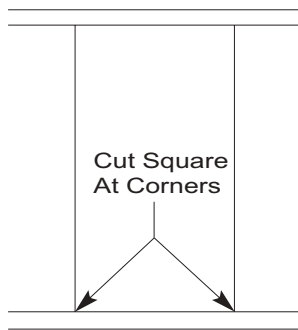

Once the door is securely fastened into place, remove the presquaring clips, install any remaining door hardware and adjust the strike plate so that the door closes and seals properly.

# Doors - Installation

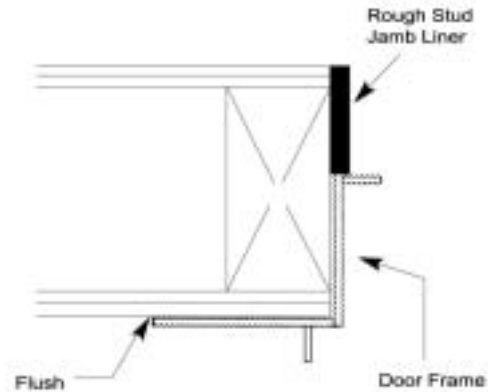

Mobile Home

## Helpful Installation Hints and Tip

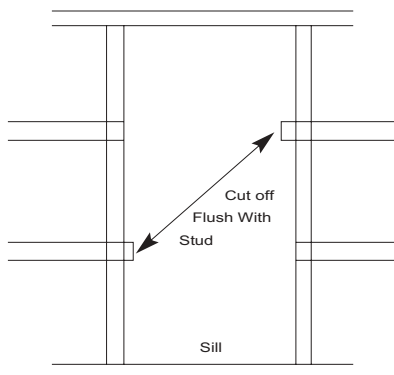

(A)  
If sidewall metal is not cut out squarely at bottom of rough opening, door cannot be installed properly. Door will not operate properly as a result. Do not leave rounded sidewall metal protruding into door opening. Cut it out square with door opening.

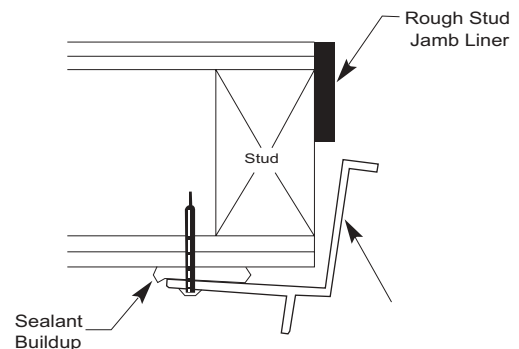

(C)  
Do not install plywood jamb liner until door has been completely installed. Door must be allowed to protrude its full depth into the rough opening.

(B)  
Sidewall belt rails must be cut even with vertical stud. If not, door opening is reduced. Door outer frame will bind against protruding pieces of belt rail wood.

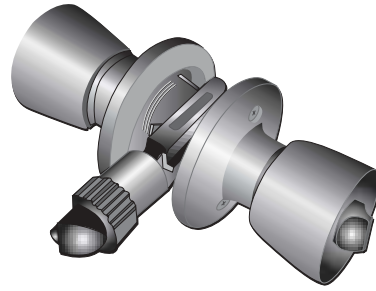

(D)  
Avoid excessive buildup of sealant under door frame mounting flange. Buildup of sealant may cause frame rotation and/or distortion which will effect the operation of the door system.

## Vinyl Windows

Strong, durable, no maintenance all-vinyl chambered frame never needs painting.

- Heat fusion welding bonds frame and sash corners, preventing water and air infiltration at the joints.
- The narrow frame and sash profiles allow a large glass area for maximum exterior view.
- Interlocking meeting rails provide a superior sealing system that keeps out wind & water.
- Universal design for all wall siding applications. (Lap siding requires J-rail #462762.)
- Sash tilts inward; can be removed for cleaning from inside.
- Full 3/4 insulating glass for optimum thermal performance. Optional Low-E coated glazing is available.
- Easy to use mull system allows windows to be joined with each other to create interesting combinations.

# Windows - Installation

The window must be installed correctly or it may not function properly. Improper installation may void the product warranty.

**NOTE: For installation and operation, Philips recommends a minimum of a 4-inch nominal wall thickness.**

Figure 1

1. Check the squareness of the rough opening. The difference between 1 to 4 and 2 to 3 should not exceed 1/4". Fig. 1

Width Measurement (1 to 2) and (3 to 4).  
Add 1/4" to window buck dimension.

Height Measurement (1 to 3) and (2 to 4).  
Add 3/16" to window buck height dimension.

For windows over 27" in width, check the middle of the rough opening height measurements. This measurement should equal +3/16" over window buck height dimension.

**NOTE: The opening must be clear and free of obstructions that would hinder the proper installation of the window.**

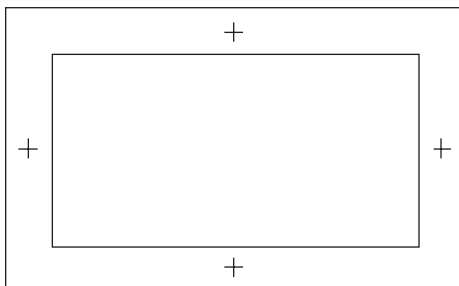

Figure 2

2. Apply sealant tape to the back of all sides of the mounting flange centering the tape over the holes in the mounting flange, making sure there are no gaps of voids, so as to prevent the window from leaking. Optional use of cartridge or gun type caulk is permitted. Use at least a 1/4" bead centered over the holes in the mounting flange.
3. Place window in the opening, sill resting on the bottom of the opening and centered.
4. While holding the window flat against the exterior wall, start the first fastener as close to the center as possible on one of the side frame mounting flanges. The second fastener should go on the opposite side. The third fastener should be as close to the center as possible on the bottom frame mounting flange and the fourth fastener should be centered on the top. (Note: If scaffolding interferes with the top of the window, it is acceptable to install this later when it is more accessible.)
5. After the primary fasteners have been installed, check the window to be certain it is centered in the opening. Install the rest of the fasteners, starting in the center of each member, progressing out towards the corners, through the holes provided in the window.

**NOTE: When installing Philips prime windows, we recommend using fasteners which allow for a minimum of 1" stud penetration at 4" o.c. for over siding applications and 8" o.c. for under siding applications.**

6. Remove shipping clips and check window for proper operation.
7. On lap siding windows, install siding over flange, extending the siding into the jamb pocket, according to siding manufacturer's recommendation.

# Windows - Installation

## Egress Window Installation: For installation

\* Follow steps 1 through 7.

### NOTE:

No mounting system shall be used that will affect the operation of the egress provisions of the window, nor shall appurtenance mounting clips or latches be changed or additional ones installed.

The use of any trim and storm system not approved for the unit nullifies the certification and any alterations of any approved trim and storm nullifies the certification.

The installed egress window with the trim and storm system in the mobile home must comply with Sections 3280.404(b) and 3280.404(c) of the Federal Mobile Home Construction and Safety Standard.

Do not place any furniture or other objects in front of the egress unit that will prevent the occupant from reaching it for its intended use. Coverings which might impede access may render this emergency exit unusable during a fire or similar disaster.

Window must demonstrate egress capability before installation can be considered complete. When home is placed (leveled) on its site, the window must be rechecked for satisfactory egress function.

The operating instructions and certification label are a permanent part of the unit and must not be removed.

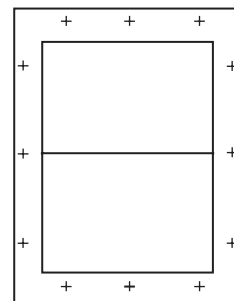

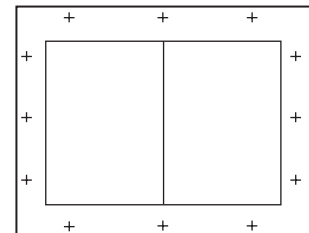

Should any of these instructions be disregarded, the certification as an egress unit is immediately nullified and the unit will no longer be considered an egress window.

## Installation of Trim & Storm System.

We offer 2 basic trim and storm concepts or self-storing storm options.

1. **Trim and storm for horizontal or vertical sliding window installation.** Hold frame, with storm window installed, up to opening. Square up trim, center and attach to wall - sill first (2 to 6 fasteners). See Figure 3. The storm sash must be in the trim while being installed.
2. **Self-storing storm for horizontal or vertical sliding window installation.** Place self-storing storm in the opening. Center the window and attach to wall - sill first (2 to 4 fasteners), then head (2 to 4 fasteners), the jambs (2 to 4 fasteners). See Figure 3. Remove shipping clips.

**GALST37** 37' STRAPPING  
**GALST600** 600' STRAPPING

1-1/4" wide galvanized strapping exceeds 4,724-lbs breaking strength. (100 lb. roll Approx. 650')

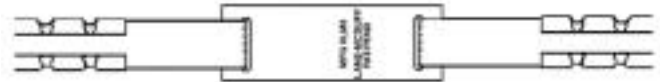

## Buckle with Strap

**Part No.** 8' STRAP W/BUCKLE  
**ST1-8**

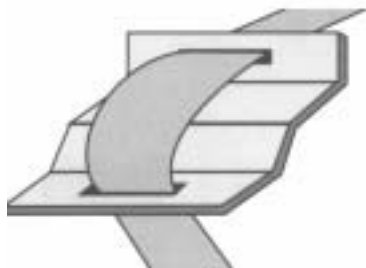

Galvanized strap with single buckle for fastening around home frame.

## Strap Extender

**B-6027** 6' STRAP W/ EXTENDER

PATTENED STARP USED TO LENGTHEN A STRAP

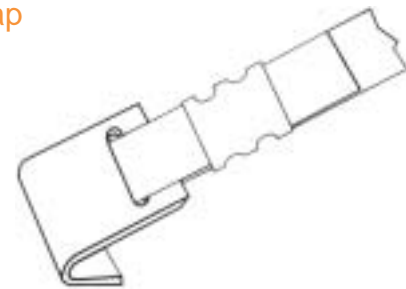

## Roof Bracket

**B-6028** GALVANIZED ROOF BRACKET

Use for cable or strap passing over the mobile home. Holds straps or cable away from roof and sides.

## Frame Tie with Strap

Frame clamp with strap for fastening around bottom flange of home frame. Frame clamp without strap also available.

**FT1-6** 6' FRAME TIE W/STRAP  
**FT1-8** 8' FRAME TIE W/STRAP  
**FT1-12** 12' FRAME TIE W/STRAP  
**FT1-14** 14' FRAME TIE W/STRAP  
**FT1-18** 18' FRAME TIE W/STRAP

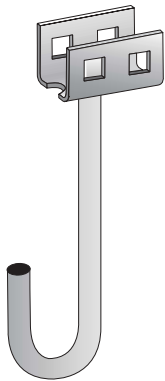

# Anchor

## Patio Slab Anchors

Patio slab hooked rod attachment with fastening and tensioning head installed when pouring concrete slab.

**Part No.**  
**CAWP**

HOOKED SLAB ANCHOR

## SUPER DUTY TRIM ADHESIVE

A fast drying, super strength spray adhesive for bonding carpets, jute pads, insulation, and other applications where a high strength adhesive is required. Adjustable spray valve allows the spray pattern to be adjusted to fit the application.

**B-2383** 15 3/4 OZ. HEAVY DUTY ADHESIVE

Cap Can pot on Top of Regular 30" Anchor

**Part No.**  
**CAP1**

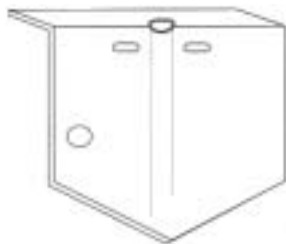

## Anchor Stabilizing Device

Prevents anchors from becoming loose by cutting through the soil when heavy winds occur. Required in most anchor installations.

**Part No.** **MSP2**

ANCHOR STABILIZERS

## Double Disk Anchors

30" double 4" disk earth anchor with double fastening and tensioning head for use with straps. Designed to be augered into extremely hard soil where 6" disk anchor will not suffice. 200/Skid; 8/Bundle.

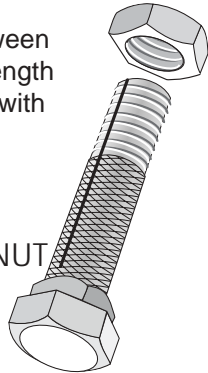

**Part No.** **3044BP**

3/4" ROD-4" DBL.DISK ANCHOR  
(Recommended for Soil Classes 2 & 3)

# Anchor

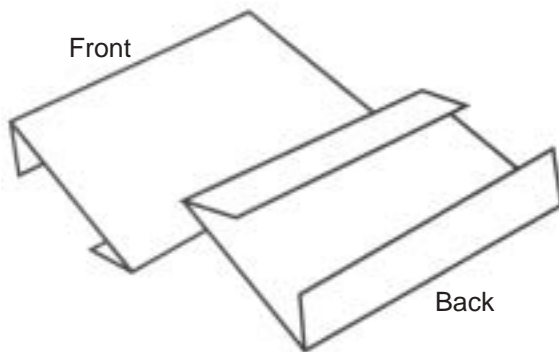

## Anchor Bolt & Nut

Knurled bolt increases friction between strap and bolt shaft for greater strength than smooth bolts. Slotted for use with strap. Not included with anchor.

### Part No.

**SBW/N** STRAP BOLT & NUT

## Strap Seal

Secures or ties strapping together with buckles or frame crimping tool.

### Part No.

**CRIMPSEAL** STRAP SEAL CLAMP

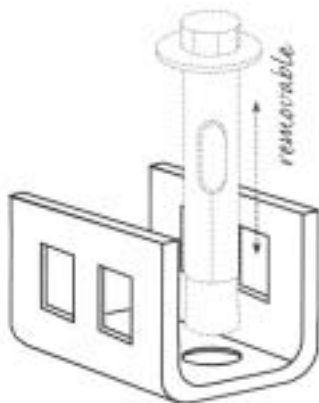

- E-5003** 12 TON STANDARD AXLE JACK
- E-5004** 12 TON LOW-PROFILE AXLE JACK
- E-5005** 20 TON STD. AXLE JACK
- E-5006** 20 TON LOW PROFILE AXLE JACK

- E-5008** 12 TON HYDRAULIC REPAIR KIT
- E-5009** 20 TON HYDRAULIC REPAIR KIT
- E-5010** OIL FILL PLUG FOR JACKS

**ALL SPECIAL ORDER**

## DOUBLE HEAD PATIO ANCHOR

### Anchor Head With Lag Bolt

Double tensioning device for use on dry concrete or existing concrete slabs. 48/Ct.

### Part No.

**CADP**  
HEAD ONLY FOR PATIO ANCHOR

### Part No.

**N/CADP** RED HEAD  
STUDS ONLY 5/8 X 3-1/2

# Steps

## Enhance Your Home With Fiberglass Steps from Lane-McDuff

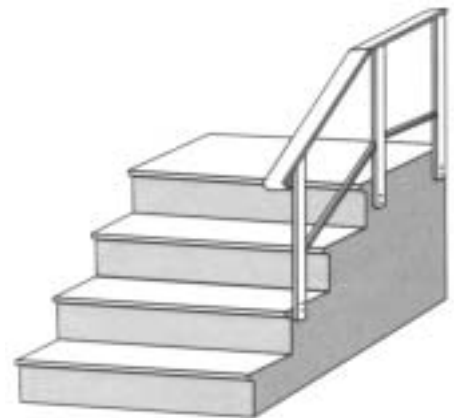

Lane-McDuff is excited to bring you the highest quality fiberglass step on the market. We know that as a homeowner you not only want an attractive product, but also a durable one. That is why our steps are made of an impact resistant fiberglass shell. You will not have to worry about wear and tear because, the durable design of our fiberglass prevents unwanted erosion and decay associated with other building materials. So if you want to make a smart, yet beautiful addition to your home go with Lane-McDuff fiberglass steps. You can reach us at any of our 11 branch locations or toll free at 1-800-792-1030.

Lane-McDuff Steps Feature:

- Improved safety with a .35 grit nonskid surface on all steps
- Weather resistant sub plywood frame
- Manufacturer's 5-year Limited Warranty
- Not effected by salt in winter
- Convenient Lifting Handles

Extensive testing proves this is the strongest and most durable step available anywhere today. The factory quality control method assures the same high standard of workmanship step after step after step. Exclusive marble-like finish is unequaled anywhere in looks and style.

# HVAC

## Floor Registers

Especially designed and engineered by Nordyne for all manufactured home applications. With special attention given to the elimination of air flow restriction, these modern registers and grills allow for maximum air circulation for both heating and cooling.

### State of the art features that save you time and money.

- Engineered to provide properly directed maximum air flow for heating and cooling.
- Oversized flange allows for fast and simple installation.
- Designed with narrow shutters to avoid blocking air flow through the duct system.
- Louvers of heavy gauge steel to prevent bending are closely spaced to prevent small objects or high heels from going through – completely safe.
- Coated with maintenance-free abrasive resistant enamel finish. Positive 100% closing on registers.
- Register operating device extends only 1/16" above the top of the register. May be either hand or foot adjusted.

**E-5028-WH**

1000/CTN. 8" X 1 1/4" WH.HEX HD. SCREW

# Sealants

## Professional Grade Painters Acrylic Latex Caulk

**B-2392**  
PAINTER'S 7 YEAR LATEX CAULK

### Premium Qualities

- Flexible
- Paintable
- Good Adhesion
- Non-Sagging
- Freeze Thaw Stable
- Energy Saver
- Mildew Resistant

### Ideal For:

Caulking window and door frames, baseboards, trim, siding corner joints, electrical boxes, pipe entries, outdoor faucets and around air conditioning.

Geocel 2300 Tripolymer Sealant is a single component, high-performance elastomeric sealant for use in a wide variety of roofing, window, door, siding, trim, architectural metal, automotive, manufacturing and general construction applications.

- B-2381** 11 OZ. GEOCEL CLEAR SEALANT
- B-2382** QT. GEOCEL CLEAR SEALANT
- B-2382-G** GAL. CLEAR GEOCEL SEALANT

## SUPER DUTY TRIM ADHESIVE

A fast drying, super strength spray adhesive for bonding carpets, jute pads, insulation, and other applications where a high strength adhesive is required. Adjustable spray valve allows the spray pattern to be adjusted to fit the application.

- B-2383** 15 3/4 OZ. HEAVY DUTY ADHESIVE

## CONSTRUCTION ADHESIVE

NOTE: For use with all types of material, ABS Plastic, wood, PVC, and Foam Insulation

### 117 PANEL & CONSTRUCTION ADHESIVE MULTI-PURPOSE

This ultimate all-around multi-purpose construction adhesive for homeowner and contractor use. This versatile product is a high-strength, rubber based adhesive for installing paneling, plywood and other wallboard panels, as well as foam insulation, furring strips, moldings, wall decorations and ceramic tile. Light colored, non-staining, waterproof. Resistant to severe temperature changes. Meets specifications ASTM C-557-65T, BOCA 73-36, and HUD/FHA. Extremely Flammable.

**Materials:** Paneling • Plywood • Gypsum Drywall • Wallboard • Foam Insulation • Furring Strips • Moldings • Subflooring • Ceramic Tile. Bonds firmly to dry concrete and clean metal.

- B-2391** PANEL & CONSTRUCTION ADHESIVE

### Premium Qualities

- Good Adhesion
- Elastic, Flexible
- Pliable
- Non-yellowing
- Paintable
- Mildew Resistant
- Ease of Use
- Freeze - Thaw Stable
- Air Free/Product
- Vacuumed

- B-2393-C** ALL-IN-ONE CLEAR SILICON CAULK

# Safety & Promo

## Safety

**B-2045** HOME FIRE SAFETY KIT

**B-2646**

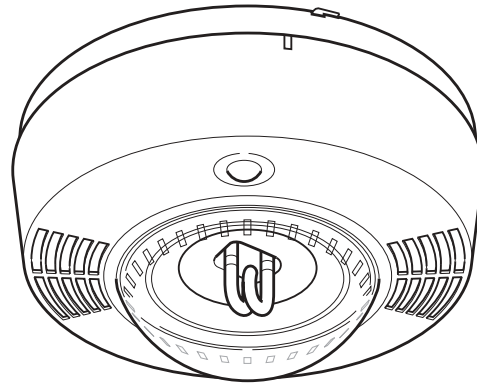

ELECTRIC SMOKE ALARM

**B-2647**

SMOKE ALARM W/ 9V BATTERY  
BACK-UP

### Handy Hints on Smoke Detectors:

1. For best safety, have at least two smoke detectors. Place one near the kitchen, the other near the bedrooms.
2. Make it a habit to check your batteries regularly.
